

Scheme/LISP

A functional and dynamically typed

language with good support for lists
or order functions.

LISP and Scheme's Original Designers

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

John McCarthy (1927-2011)
Original designer of **LISP** (1958)

Also coined the term
Artificial Intelligence, and
for many years was a
leading AI researcher.

Guy Steele and **Gerald Sussman**
Original designers of Scheme (1975)

Racket is a modern
dialect of Scheme, with
many new ideas added.

Scheme Probably **Can't** Get You a Job!

It's mostly a **research language** used by a subset of academic programming language resea

The original version of **JavaScript** was implemented as a Scheme-style language, before being modified to look more C-like.

Add WeChat edu_assist_pro

A variant of LISP called **Clojure** has more recently gained some popularity for practical programming (but it's still pretty niche compared to other languages)

Clojure

What's Scheme/LISP **Good** for?

Traditional **symbolic**
AI research.

mainstream lang

Writing programming
languages and programming
language tools.

What's Scheme **Not** so Good For?

- Scheme is generally **not** as efficient as other languages.
 - Dynamically typed
 - Reliance on singly-lists
- Compared to the most popular main languages, Scheme is **not** used much so it can be hard to find support for it.
- Scheme's notation is simple, but maybe too simple. **()-style notation** results in lots and lots of parentheses, which many programmers **dislike**.

Measuring the performance of different programming languages is surprisingly difficult to do fairly. Check out [the Computer Language Benchmarks Game](#)

Major Features of Scheme

Functions are first-class objects

Functions can be passed and returned (including closures)

Interpreted

Easy to evaluate individual expressions <https://eduassistpro.github.io/>

Memory-safe and garbage-collected

No dangling pointers, no manual memory management

Homoiconic

Scheme programs are written as Scheme lists

Flexible

Powerful macro system allows for major changes to the language

Add WeChat edu_assist_pro

Major Features of Scheme

Types

Dynamically typed, i.e. types checked at run-time

Symbols

Singly-linked lists are

Continuations

Lexical Scoping

One of the first languages to fully implement the lexical scoping rules we now take for granted

Tail Recursion

Tail-recursive functions are automatically optimized into loops

Major Features **Not** in Scheme

Features **not** part of Scheme

No type declarations

No pointers

No built-in notion of obj

Add WeChat edu_assist_pro

Features We **Won't** Be Using

No loops

No mutation

variables

Instead, we'll use **functional** style,

which is what our next language
(**Haskell**) will force us to use.
